

EE5600 Assignment 3

Abhishek Thakur

Abstract—This document contains the solution of geometry through linear algebra through the concept of optimization.

1 PROBLEM

Maximize $Z = 5x + 3y$ subject to $3x + 5y \leq 15$,
 $5x + 2y \leq 10$, $x \geq 0$, $y \geq 0$.

2 EXPLANATION

$$Z - 5x - 3y = 0 \quad (2.0.1)$$

$$3x + 5y + s_1 = 15 \quad (2.0.2)$$

$$5x + 2y + s_2 = 10 \quad (2.0.3)$$

We will write the simplex tableau

$$\left[\begin{array}{ccccc} x & y & s_1 & s_2 & c \\ 3 & 5 & 1 & 0 & 15 \\ \boxed{5} & 2 & 0 & 1 & 10 \\ \hline -5 & -3 & 0 & 0 & 0 \end{array} \right] \quad (2.0.4)$$

Keeping the pivot element as 5, we will use gauss-jordan elimination.

$$\left[\begin{array}{ccccc} x & y & s_1 & s_2 & c \\ 0 & \boxed{\frac{19}{5}} & 1 & \frac{-3}{5} & 9 \\ 1 & \frac{2}{5} & 0 & \frac{1}{5} & 2 \\ \hline 0 & -1 & 0 & 1 & 10 \end{array} \right] \quad (2.0.5)$$

Keeping the pivot element as $\frac{19}{5}$, we will use gauss-jordan elimination.

$$\left[\begin{array}{ccccc} x & y & s_1 & s_2 & c \\ 0 & 1 & \frac{5}{19} & \frac{-3}{19} & \frac{45}{19} \\ 1 & 0 & \frac{-2}{19} & \frac{1}{19} & \frac{20}{19} \\ \hline 0 & 0 & \frac{5}{19} & \frac{16}{19} & \frac{235}{19} \end{array} \right] \quad (2.0.6)$$

In this tableau, there are no negative elements in the bottom row. We have therefore determined the optimal solution to be:

$$(x, y, s_1, s_2) = \left(\frac{20}{19}, \frac{45}{19}, 0, 0 \right) \quad (2.0.7)$$

$$Z = 5x + 3y \quad (2.0.8)$$

$$Z = 5 \times \frac{20}{19} + 3 \times \frac{45}{19} \quad (2.0.9)$$

$$Z = \frac{235}{19} \quad (2.0.10)$$

Fig. 0: optimal point through the intersection of various lines

Hence, the maximum value of Z on the given constraint is $\frac{235}{19}$.
